## The simplicity of handsfree talking with numerous caller identification possibilities

**Making and taking calls is simple with the Gigaset DA610. The handsfree function enables freedom-of-movement, while the caller identification feature lets you easily see who is calling. The Gigaset DA610's display enables you to check on time, date and call duration at any time.**

Your contact will never be more than a few seconds away with up to 50 phonebook entries possible and 10 speed dial numbers enabling one-touch connection.

The Gigaset DA610 gives you the choice of 10 melodies and 4 volumes to alert you to incoming calls. Alternatively you can turn the ringer off when you want some peace and quiet, and rely on visual call notification. Another handy feature is the VIP call indication giving you the ability to designate certain contacts as VIPs, and assign them a unique ringtone and visual notification. If you wish, you can set the phone to ring only when a VIP calls. To quickly call back recent contacts, simply use the last number redial function to get in contact with up to 5 of your last dialled numbers. In addition the phone stores a list of the last 50 calls so you can easily check on your call history, transfer them to the phonebook or call them back. You may also choose to block certain outgoing calls such as costly toll numbers with the call blocking function.

Choose the Gigaset DA610 corded phone for easy handsfree talking, with caller identification and much more.
